## DETAILED ACTION

### *Response to Amendment*

1. The reply filed on 02/10/03 consists of cancellation of claim 5, amendments to claim 1, amendments to the title and remarks related to rejection of claims. The claims are not allowable as explained below.

### *Drawings*

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the wiring traces on the adaptor board must be shown or the feature(s) canceled from the claims 1-4. No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

4. Claims 1-2 is rejected under 35 U.S.C. 102(b) as being anticipated by Schmitt et al.

Schmitt (Figures 1-3b) shows a circuit card package 10 with a first circuit card 30 with a first card edge connector 30a and connected to an interface adaptor board

Art Unit: 2839

(motherboard) 14 by a connector 36 wherein the adapter board has a card edge connector 34 for mounting another circuit card 32 such that the cards 30, 32 are parallel to each other and orthogonal to the adaptor board.

Schmitt further shows a substantially planar faceplate bracket 38 orthogonal to the circuit cards 30, 32 and having a plurality of openings for accepting the circuit cards by latches 40, 42 and a second bracket member (not numbered) formed by a side and base for supporting the adaptor board and the circuit cards wherein the side and the base are at right angles.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 3-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schmitt et al. in view of Boyer.

Schmitt shows all the features of these claims as described in Paragraph 4 above except the latch member with an opening and a spring on the second bracket member. Such structure or latching is well known in the art of electrical connectors. Boyer shows such a structure or latching mechanism (a latch 47 engaging an opening 46). Boyer further discloses that the latch may include a spring. It would have been obvious to one having ordinary skill in the art at the time of the instant invention to provide such a structure or a latching mechanism on the Schmitt's circuit cards and the

bracket because this would provide a flexible means to secure the card to the bracket as shown by Boyer.

***Response to Arguments***

7. Applicant's arguments with respect to claim 1-4 have been considered but are moot in view of the new ground(s) of rejection. Claims 1-2 clearly read on a conventional motherboard found on most of the computer as clearly shown by Schmitt. Although not as clearly shown as Schmitt, Jo also shows all the features of claim 1.
